

INPHO`S PHOTOGRAMMETRIC SYSTEM – THE KEY TO HIGH PRODUCTIVITY

Manfred Sigle
INPHO GmbH, Stuttgart, Germany

INPHO is a leading provider of photogrammetric systems with numerous users all over the world. INPHO's products cover the complete workflow of photogrammetric projects, including aerial triangulation, stereo compilation, terrain modeling, orthophoto production and mosaicking. Key benefits of the system are the rigorous modelling of aerial and space-borne camera systems, and its high degree of automation.

With the latest version 5.1 INPHO has introduced several new highlights. In addition to its well-proven terrain extraction, the new MATCH-T DSM offers the acquisition of digital surface models with highly dense point clouds that till now have only been achievable by LIDAR. Orthophoto production and terrain modelling are now possible with distributed processing, making use of multiple computers or processors.
